Total Dimension: 15" Height x 53" Length x 3" width

Use Super Bright LED Technology!

Brighter than neon (and 80% more efficient), our LED Signs use Super-Bright, Long Lasting (100,000 hours), Energy Efficient Light Emitting Diodes. Although the signs are outdoor bright, they are designed to be installed inside your store front window. The LED Sign's moving text message can be seen and read from the sidewalk or from passing traffic over 300 feet away! And the brilliant Tri-Color messages are bright enough to be seen even in the glare of the afternoon sun.

UltraBrite LED Signs Are User Friendly!

Our LED signs can be easily programmed via a hand held infrared remote control. Each sign has a simple menu structure allowing you to enter messages, and change settings with ease. No more aggravation or frustration caused by trying to connect a sign to your PC, wasting valuable time, or having to hiring a computer engineer to figure out how to make your computer talk to your sign. However, we do offer a PC version that connects any laptop or PC running Windows to your sign via an RS-232 port/cable. Simply connect a cable from your sign to your computer, run our easy to use, user friendly software, and in minutes you will have programmed your sign.
